

JAY HAN

3140 S Indiana Ave

Apt | (312) 617-5072 | jhan38@hawk.illinoistech.edu | <https://www.linkedin.com/in/jin-sung-han-49974920a/>

SUMMARY

Frontend developer with 3+ years of experience building responsive and scalable web and mobile applications using modern frameworks React, Next.js, TypeScript, and Flutter.

Led migration from legacy stacks (jQuery, EJS) to React-based architecture, integrating state management tools Zustand and React Query, and establishing a culture of clean code through code reviews and internal tech studies. Experienced in chart visualizations, PDF generation (html2canvas, jsPDF), and deploying CI/CD pipelines with AWS and GitHub Actions.

Strong belief in continuous learning, clear communication, and ownership over tools and code.

EDUCATION

Illinois Institute of Technology, Stony Brook, IL

August 2025

ITM, N/A

- Major in Information Technology Management

Stony Brook University, New York, NY

August 2019 - June 2022

TSM, 3.40

- Major in Technology System and Management
- TSM Senator
- Myanmar Map Creating Project with Incheon City
- STEAM Program
- Volunteering Club

SKILLS

- | | | |
|--|---|--|
| • Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Flutter, EJS | • State Management: Zustand, React Query, Riverpod (for Flutter) | • Styling & UI: TailwindCSS, HTML5, CSS3 |
| • Develop & CI/CD: GitHub Actions, Netlify, Vercel, AWS EC2/S3 | • Testing & Tools: html2canvas, jsPDF, Chart.js, Git, Figma | • Mobile Development: Flutter (iOS/Android cross-platform) |
| • Deployment: Experience with both serverless (Vercel, Netlify) and cloud-based (AWS) environments | • Soft Skills: Technical leadership, code review culture, team communication, mentoring junior developers | |

EXPERIENCE

Frontend Developer

Union Contents, Seoul/South Korea

August 2022 - October 2024

- Migrated legacy codebase (Vanilla JS, EJS, jQuery) to modern stacks React, TypeScript, Tailwind, enhancing maintainability and scalability
- Proposed and implemented folder structures, naming conventions, and PR guidelines in multiple projects (AUTOGREEN, MAILHERO), improving team productivity and onboarding experience
- Led frontend development of cross-functional projects such as MOVIEBOARD and MAILHERO, managing component architecture, team collaboration, and construct pipeline
- Constructed and integrated complex data visualizations using amCharts5, and implemented features for Excel/PDF export for reporting interfaces
- Introduced state management libraries (Zustand, React Query) and UI documentation tools (Storybook) to improve frontend modularity and shared component workflows

- Built and deployed frontend apps using AWS Route53, S3, and CloudFront, gaining hands-on CI/CD and DevOps experience
- Facilitated onboarding and mentorship by guiding junior developers through projects UNION and MYSO, while leading tech study sessions
- Designed and developed SSR-ready personal tech blog with Next.js and Vercel, enhancing understanding of rendering strategies (CSR, SSR, SSG, ISR)

PROJECTS

Mobile App Project - StickyNote

July 2025

- Built a note-taking and task categorization app to help users visually manage to-do items
- Created modular UI components using Flutter, supporting multiple categories and color-coded notes
- Applied structured layout design for user-friendly navigation and efficient task tracking
- Focused on UI polish and UX design, enhancing app usability for everyday productivity

Mobile App Project – FocusPulse

April 2025

- Created a customizable study timer app tailored for students preparing for standardized exams (e.g., TOEIC, TOEFL, etc.)
- Formulated intuitive UI/UX to support focused study sessions, including preset and custom timers
- Implemented Flutter with responsive layout and persistent storage
- Achieved experience in state management and local data handling for offline use

Portfolio Website

December 2024

- Designed and developed a personal portfolio website to showcase projects, skills, and career history
- Built using modern frontend technologies with a focus on clean UI/UX, responsive design, and accessibility
- Deployed site for public access, acting as a central hub for professional identity and outreach
- Acquired deeper understanding of branding, developer storytelling, and presentation of technical work

Jay's Tech Blog

July 2023

- Established a personal technical blog using Next.js and Vercel to document learnings, projects, and development insights
- Designed and accomplished a blog from scratch, including custom UI, page structure, and post layout for readability and scalability
- Leveraged Next.js features such as Static Site Generation (SSG) and Server-Side Rendering (SSR), gaining a deep understanding of rendering strategies (CSR, SSR, SSG, ISR)
- Improved technical writing and code documentation skills by publishing detailed development notes
- Integrated SEO best practices and responsive design to ensure optimal user experience across devices
- Hosted blog operating Vercel, with automated deployment triggered by Git commits
